

Claude Bootcamp

Goal: Build a tennis court booking app

1. Pre requisite

- Claude Code Pro account
- Claude setup on local machine
- Node JS runtime environment
- GitHub repo

2. Solution approach

- Stage 1 - basic app with frontend and local persistence
- Stage 2 - enhanced app with server and database
- Stage 3 - authentication and user mgt
- Stage 4 - deploy the app for global access

3. Stages

Stage 1 - Simple basic app

>Build a simple app that helps people to book tennis courts at their local courts. Start by building something that I can test. We can add the backend and authentication later.

Use the techstack with React + Vite.

To start with mock the data and use local storage for persistence. You can later extend this with a real backend.

#To manually start the application (FE)

#list the process ids

```
netstat -ano | grep -E ":(5173|5174)\s" | grep LISTENING
```

TCP	:::1:5173	:::0	LISTENING	16132
TCP	:::1:5174	:::0	LISTENING	38760

#kill the process ids

```
taskkill //F //PID 16132
```

```
taskkill //F //PID 38760
```

#launch the application

```
cd C:\vijay\claude\projects\tennis-booking
```

```
npm run dev
```

Then open <http://localhost:5173> in your browser.

Stage 2 - Build the backend

>Add the backend next with NodeJS and Express. Use Neon Serverless Postgres for the database persistence. Keep the application structure simple so that I can deploy this as a single artifact. I don't want to maintain and start separate frontend and backend components.

a. Create a free Neon project at neon.tech

b. Copy the connection string

->

```
postgresql://userid-neondb:neondb-pwd@ep-summer-bar-aterjfor-pooler.c-9.us-east-1.aws.neon.tech/neondb?sslmode=require&channel_binding=require
```

c. Seed the database (run once)

```
cd C:\vijay\claude\projects\tennis-booking\server
npm run seed
```

d. Start the server

```
cd C:\vijay\claude\projects\tennis-booking
npm run dev
```

e. Launch the app

open <http://localhost:5173> in your browser
Vite runs on :5173, Express on :3001

#To manually start the application (FE + BE)

#list the process ids

```
netstat -ano | grep -E ":(5173|5174|3001|3000)\s" | grep LISTENING
```

TCP	0.0.0.0:3001	0.0.0.0:0	LISTENING	16068
TCP	:::3001	:::0	LISTENING	16068
TCP	:::1:5173	:::0	LISTENING	16132
TCP	:::1:5174	:::0	LISTENING	38760

#kill the process ids

```
taskkill //F //PID 16068
taskkill //F //PID 16132
taskkill //F //PID 38760
```

#start the app manually

```
npm run dev
npm run build && npm start
```

Stage 3 - Authentication & session mgt

>Use Better Auth to incorporate user authentication

a. update DB with session mgt seed data

```
cd C:\vijay\claude\projects\tennis-booking\server
npm run seed
```

Database seeded successfully with 4 Auth tables –
user, session, account, verification plus added user_id to bookings.

b. setup and verify .env variables

```
BETTER_AUTH_SECRET=e6060d4d07794be50aXXXXXXXXXX
BETTER_AUTH_URL=http://localhost:3001
CLIENT_URL=http://localhost:5173
```

c. To manually start the server

```
cd C:\vijay\claude\projects\tennis-booking
```

npm run dev
npm start

- d. Launch the app
open <http://localhost:5173> in your browser

Stage 4 - Deploy on the web

>Deploy this app on Render. Make it accessible globally.

- a. create a new GIT repo
- b. upload all code files to the repo
- c. create an account on <https://render.com>
- d. setup new project on render

New → Web Service → Connect GitHub → Provide your repo link -> Add below env variables -> deploy

- e. build command: `npm install && npm run build && cd server && npm install`
- f. start command : `node --use-system-ca server/index.js`
- g. capture the link generated by render

eg. <https://claude-bootcamp-june-1.onrender.com>

h. DATABASE_URL

postgresql://neondb_userid:neondb_pwduser@ep-summer-bar-aterjfor-pooler.c-9.us-east-1.aws.neon.tech/neondb?sslmode=require&channel_binding=require

BETTER_AUTH_SECRET e6060d4d07794be50a1f32XXXXXXXXXX

BETTER_AUTH_URL <https://claude-bootcamp-june-1.onrender.com>

CLIENT_URL <https://claude-bootcamp-june-1.onrender.com>

- i. verify that application launch in a few mins at
<https://claude-bootcamp-june-1.onrender.com>
